Product Data Management

Digital Mock Up

Product Lifecycle Management (PLM)

PLM is an important tool in enterprise & information strategy. Organisations can digitally manage product information from concept to retirement, allowing unified, information driven decisions at every stage of the lifecycle.

REP provides consultation, engineering and training support to its customers at every stage of the product lifecycle – a complete product data management solution.

REP understands the growing need to introduce a PLM tool into your business to help manage the increasing amount of data that today's design programs require.

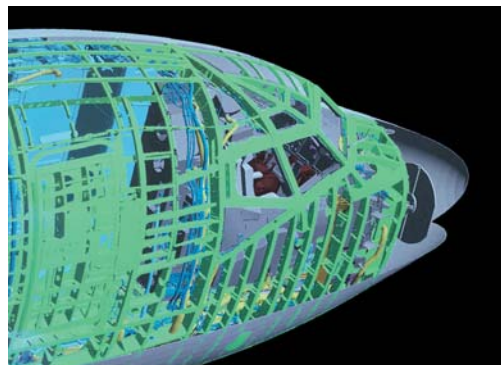

With this in mind, together with the variety of different tools currently on the market, REP offers you the support required to identify, configure and implement the right PLM solution that suits you.

Digital Mock Up (DMU)

As part of our service offering, we have a multi-role DMU team providing support to our clients which include Airbus and their major suppliers across all areas of the aircraft wing. This includes both structures and electrical systems.

The disciplines covered by REP teams include:

- Zone control
- Clash detection / vaulting
- PDM
- Help desk
- Design
- Training
- Consultancy
- Project management
- On-site support and training

Software

REP currently support numerous software programs to facilitate our various clients work including:

- Windchill
- Teamcenter
- Smarteam
- PRIMES (AIRBUS)
- V.P.M

“Resource Group have been providing an exceptional service for us on several aerospace programmes over many years. They are our preferred choice for managing the data transfer and vault loading process, and have provided a reliable team who are efficient, accurate and very customer focused.”

Clint Diffin, Chief Engineer, GKN Aerospace
